

# East of England R7 Wish List

**Ian Carle MIEEM**  
**HERC Records Centre Manager**

# Database

- **Online**
- **Retaining the R6 structure – no simplification**
- **Customizable query/analysis tool – such as SQL Management Studio**
- **Able to interact/exchange with NBN ATLAS/Indicia – without downloading, reformatting and uploading**
- **Ability to link records to a known site by means other than grid ref**

# Database

- **Needs to be customizable/editable within the LERC community – don't want to be paying people to upload data**
- **Normal database facilities with user access controls, verification procedures and flagging of confidential/sensitive records**
- **Tool for importing R6 data into system**
- **R6 site, subsite structure – essential for our Nature Reserves data**

# Beyond the database

- **Extending its facilities further to cover datasearch provision, SLA delivery, ad-hoc queries**
- **Ability to incorporate ATLAS/Indicia data in to searches**
- **High quality mapping (field boundaries need to be displayed) as backdrop for outputs**
- **Menu of designations/statuses for users to select from**

# Beyond the database

- **Ability to restrict searches geographically**
- **Ability to analyse site species lists – Ellenberg values, indicators etc**

# What next?

- **Difficult choices:**
  - **Stick with recorder for as long as possible?**
- **We need something new and will need to work together and spend some of our limited funds to achieve it**
