ALERC Conference 2021

October 13th
Online through Microsoft Teams

Getting into the Habitat

Join the ALERC conference which, for the first time, looks specifically at habitat data and also addresses an important new report on species data.

After the success of last year's event, ALERC invites you to a second online conference to hear about developments around environmental data and discuss ways forward for LERCs. Despite the ongoing difficulties of the pandemic, it has been another busy year with a major new report into species data in England (also looking again at the Scottish Biodiversity Information Forum Review) published and a project looking at LERCs and habitat data. You'll have the chance to hear about all of this and more and have plenty of opportunity to ask questions and air your views.

Morning

Lisa Chilton - Introducing the new NBN Trust CEO
Mapping the Species Data Pathway: Connecting Species Data Flows - Bill Butcher introduces a major new report.
Discussion on the report - what will it mean for LERCs and the sector as a whole? Your chance to ask questions and have your say.

Soapboxes
Your chance to air any issue you want - five minutes and one slide

Afternoon

ALERC Annual General Meeting

Habitat Data
This year the afternoon session will be given over to discussion on habitat data.

LERC project with UKHab - hearing from the LERCs involved and your chance to ask questions on all things UKHab related

Dan Carpenter - data standards
Tony Price - Somerset Habitat Suitability Index layer
Leon DeBell - sharing and facilitation platform
Andy Foy - Habitat data systems
